

Jackfruit Peptide

Jackfruit is a tropical fruit rich in sugars, proteins, B vitamins(B1, B2, B6), vitamin C, minerals, and fatty oils, which is not only edible, but also could be used for medicine and timber. SEMNL jackfruit peptide is based on jackfruit in Hainan, and its macromolecular protein is degraded into a small molecular peptide by enzymatic hydrolysis technology. Jackfruit peptide is easily absorbed by human body and is better used in functional foods.

Application:

- Dietary supplements;
- Food.
